Badal Grey

Polished

We've enriched our La Natura Collection with new designs that even more closely duplicate the natural beauty of stone. Thanks to modern plotter technology we've achieved more realistic veining — longer and finer veins that give a natural impression and sophisticated backgrounds that add depth to the material. The structure is more detailed, so that the surface looks authentic and timeless, and is perfectly suited to many different types of interiors.

Easy Maintenance & Cleaning

Suitable for Food Contact

Natural Raw Materials

Long Lifetime & Durability

Highly Scratch Resistant

Highly Stain & Natural Acid Resistant

Waterproof

Highly Bacteria Resistant

*everlasting beauty*

# Taj Mahal Gold

Taj Mahal Gold is inspired by the fabled marble of the Taj Mahal. Its sophisticated elegance and warm tone will find a place in the most luxurious projects. Sandy beige and cream colors, together with golden undertones, create an understated, yet still noticeable texture that has depth and a graceful feel.

Taj Mahal Gold's look recalls the golden era of art deco, when luxurious materials were enhanced by perfect proportions and stylized details. It goes perfectly with bronze, glass, stucco, and luxurious textiles. It stands out in interiors where classicism meets contemporary design, whether it is with an elegant countertop, wall tiling, or luxurious bathroom furnishings.

# Mistral White

Mistral White is inspired by white marble and perfectly reflects the philosophy of New Nordic Design. Clean lines, a functional aesthetic, and harmonious colors — these are the characteristics that Mistral White brings to a contemporary interior.

Mistral White's fine, creamy-white background is streaked with unobtrusive brown veins, which provide it with depth and natural structure. The design's warm tone gives a space a feeling of natural calm and balance. Mistral White harmonizes well with oiled oak, white stucco, and natural green. In combination with pastel shades, it adds refinement to an interior, while with darker materials it creates a sophisticated contrast. Mistral White is the ideal choice for those who want to bring lightness and serenity into their interior.

# Elysian Gold

Elysian Gold captures your attention at first glance. This premium engineered stone design is inspired by translucent natural quartzite. It blends a fine crystalline structure with golden, reddish-brown, and light grey veins. Thanks to its visual depth and subtle contrasts, it makes a striking yet balanced impression. It's ideal for use in interiors that feature bold combinations of materials and an eclectic style.

Elysian Gold shines in the context of modern glamour, where it stands out in combination with bronze and gold accessories and saturated complementary colors on walls or furniture.

# Duna Beige

Duna Beige brings the peace and harmony of natural materials into an interior. Its refined pattern and sandy tones are reminiscent of the eternal beauty of travertine, which in the form of engineered stone offers greater durability and minimal need for maintenance.

The aesthetic of Duna Beige resonates with the principles of Quiet Luxury — luxury that doesn't rely on ostentation, but rather on well-chosen materials and subtle sophistication. It combines well with brushed wood, linen textiles, and clay stucco. It succeeds in interiors where the emphasis is on natural light and harmony of materials and detail. Its layered, natural structure and subtle coloration create a material that is unobtrusive yet sophisticated.

# Badal Grey

Badal Grey combines the rawness of concrete with the refined elegance of marble. The grey background of this design is streaked by white and grey-brown veins that give the material depth and emphasize its timeless character. Badal Grey works perfectly in bright light or shadow, and complements anthracite, light grey, and off-white shades. It can also support distinctive color accents if more daring contrast is desired in an interior. Badal Grey is for those who believe that there is strength in simplicity.
